

## Analytics Onboard the Camera

intuVision Edge provides video analytics directly in your surveillance camera without the need for additional hardware for processing.

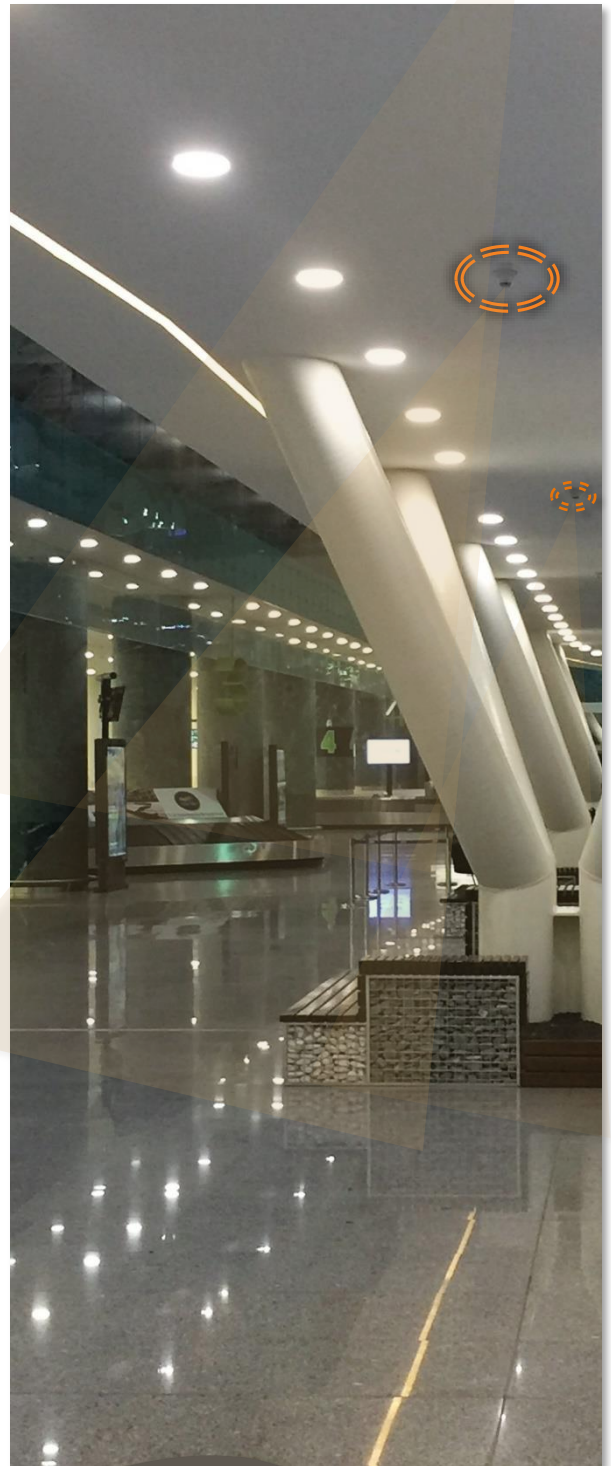

With widest selection of event rules on the edge and companion edge Event Management Application and flexible licensing options intuVision Edge presents a comprehensive edge analytics solution for integrated smart cameras such as Axis, Cisco, Dahua and Hanwha.

## Event Rules and Classification

intuVision Edge meets a range of requirements with built-in person and vehicle classification and events to choose from:

- People Counter
- Vehicle Counter
- Activity
- Enter/Exit
- Left Object
- Object Taken
- Speed
- Throughput
- Wrong Way
- Zone Intrusion

Edge events are easily setup via the intuitive web interface and generate alarms to trigger actions such as sending email notifications or playing audio clips as supported by the camera. Please contact intuVision for compatible camera models and refer to your camera's user guide for details on supported actions, integrated devices, and other camera functions such as triggers and configuration.

## Edge Vehicle/People Counter

intuVision Edge Vehicle and People Counters provide an embedded solution optimized to work in medium or light traffic areas with fixed camera views.

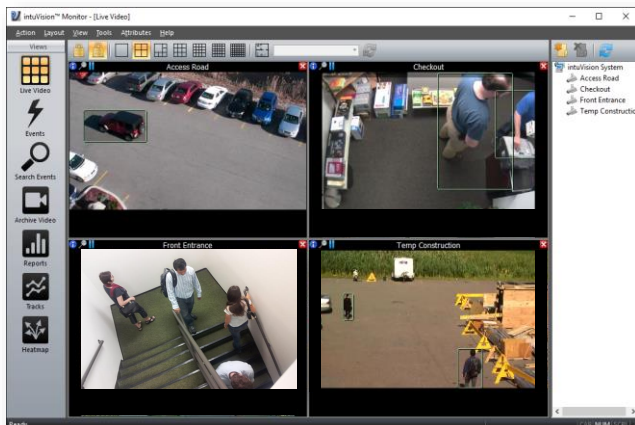

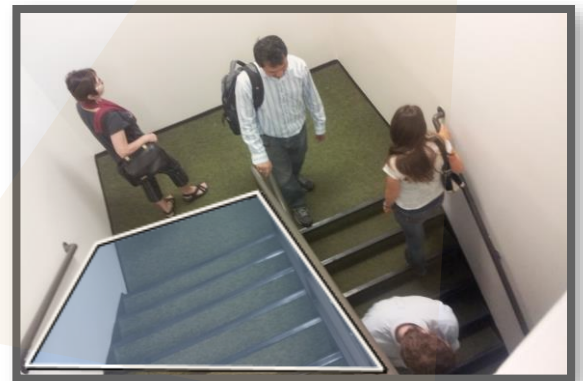

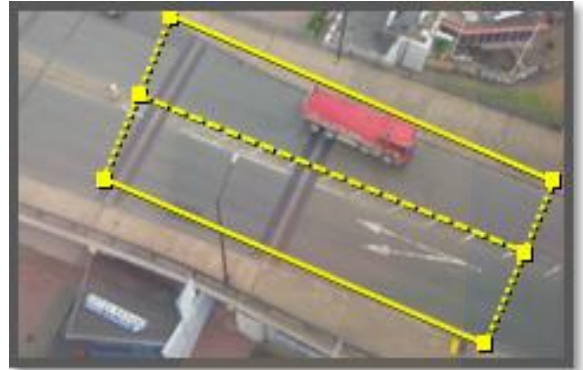

**Vehicle Counter** allows specifying traffic lanes for roadways to obtain separate counts for each lane or can be used at small intersections as well as counts at ingress/egress points of parking lots.

**People Counter** is well suited for indoors and outdoors views with light to medium foot traffic, such as building and retail store entrances.

intuVision Edge Counters store count data directly on-board the camera for 90 days and facilitate graphing the counts in real-time, providing a simple alternative for collecting people or vehicle traffic statistics.

## Edge Event Review and Management

intuVision's server-side Review and Management System is integrated with edge analytics for viewing, graphing, and exporting any edge event data. The Event Review and Management tool allows for working with integrated video managements systems such as Exacq, Milestone, Cisco VSM and others.

Event Rule	Description
<b>Activity (Loitering)</b>	Detect people or vehicular activity, specify duration for simple loitering
<b>Enter/Exit</b>	Detect vehicles or people as they enter or exit an area
<b>Left Object</b>	Detect if an object has been left behind unattended
<b>Object Taken</b>	Detect when a monitored object is removed from its place
<b>Speeding Object</b>	Detect speeding vehicles or fast moving people
<b>Throughput</b>	Detect vehicles or people crossing user-specified edges of the zone
<b>Wrong Way</b>	Detect vehicles or people moving in a user-specified direction
<b>Zone Intrusion</b>	Detect when people or vehicles enter into a restricted area
<b>People Counter</b>	Count customers and pedestrians in views with light or medium traffic
<b>Vehicle Counter</b>	Count vehicles in light traffic by direction and report by lane

One or more edge analytics events can be activated on a camera (controlled by license) depending on the camera models.

Edge analytics are based on intuVision's patented server-side algorithms optimized for efficiency and performance on the camera hardware, recommended for use in light traffic areas. Scene lighting limitations are dependent on the camera used and the weather conditions such as rain and snow may degrade the accuracy.
