New Trigger Feature: PTZ

By using the new Panoptes output trigger, PTZ enabled cameras can move based on event occurrence. This can be used to either move the event camera or any PTZ camera in the system.

Possible use cases include:

- **High Definition PTZ:** Camera can move to areas of interest based on event information from low-cost, low resolution sensors, covering much larger regions with a smaller budget. In this way you could capture high resolution video, capable of identifying people or vehicles of interest, over a wide area.
- **Zoom Camera to Region**: Pair with a Zone Intrusion event, you can place a zone around protected items or regions, and zoom in when a person of vehicle approaches the area. Easily gain close up information of intruders, and ensure the items safety.
- **"Follow" people in a scene**: For simple scenes, direction or directional line crossing events can be used to move the camera to regions of expected object future motion. With the unlimited event spies and unlimited output triggers, this could be used to cover a wide range of eventualities.

This feature is available in the current release of Panoptes, contact us for a free evaluation of the software and features. Development is ongoing, check back often for more new developments.
