

intuVision SDK

Make our top ranking analytics your own

intuVision's Video Analytics Software Development Kit simplifies surveillance monitoring. Our award winning algorithms provide unlimited video analytics functionality.

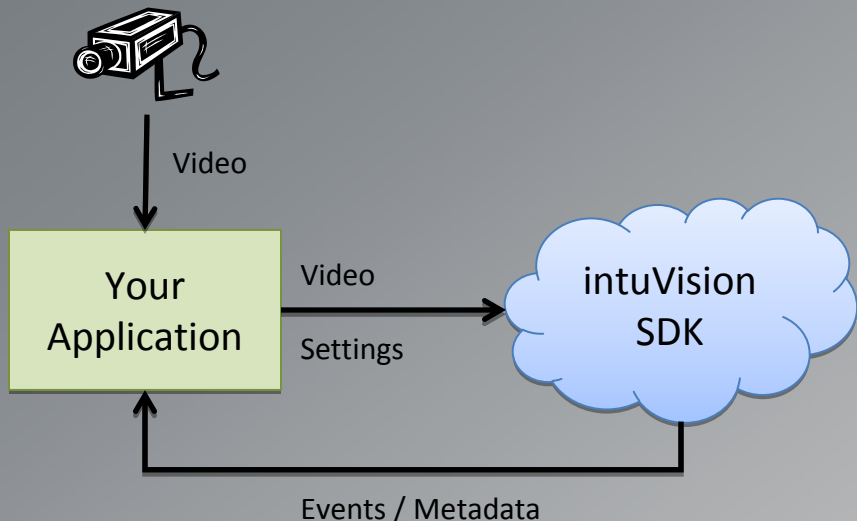

Robust C-based SDK is ideal for resellers and end users. Quick project start-up times and in depth customizations, make intuVision SDK is the perfect fit for all embedded video analytics needs.

GPU Accelerated Processing - Ultimate Performance

intuVision SDK Benefits:

- Reduce product development time by integrating ready-made video analytics into your application
- Quickly and easily implement real-time event alarms in few lines of code with our support for multiple platforms and built-in debugging tools.
- Use the SDK object metadata to customize powerful detection and tracking capabilities to your application requirements.
- Harness the power of GPU to increase processing speeds and decrease hardware costs.

intuVision SDK Integration:

SDK Object Metadata:

- Duration in scene
- Size
- Location
- Color Histogram
- Distance Traveled
- Classification Type with Confidence
