

intuVision Presents Analytics with Cisco at ASIS2013

intuVision was invited by Cisco to present at ASIS 2013. As a Cisco Connected Physical Security Solution, this marked the unveiling of new embedded analytics for Cisco's new line of smart cameras. While intuVision's server based analytics have long been integrated with Cisco's VSM solution, the new release heralds a transition to analytics on the edge.

Ashutosh Morde, intuVision engineer and spokesman, demonstrated new capabilities in the Cisco booth and impressed members from leading universities, research laboratories, and end users with our robust object tracking and the ease of use of the products.

The new on-board Event Spies can run as part of Cisco Smart Endpoints. These cameras allow users to off-board video processing, and decrease network costs by processing the video directly on the camera. Ideal for remote locations, these new products bring our robust analytics to the field. Event Spies include: Activity, Line Crossing, and Object Taken, with more coming soon!

For more information about our products, please visit our website at www.intuvisiontech.com, email us at sales@intuvisiontech.com or call us at 781-497-1015.
