

Introducing intuVision's Edge Event Management System

Our Edge Event Management System provides a low-cost, light-weight tool for analyzing, reviewing, and comparing event data from intuVision's camera embedded analytics.

Events and alarms from ActivitySpy, LineCrossingSpy, ZoneIntrusionSpy, and ObjectTakenSpy running on AXIS cameras can now be easily counted, stored, graphed, and even combined into compound events using intuVision's Edge Event Management System.

Edge Event Management System takes advantage of our top performing solutions, and combines them with AXIS edge analytics. Simply create an action rule on your AXIS camera and link that to an intuVision input trigger and then you will be ready to view events, create compound events, and produce a wide variety of statistical charts and graphs based on event occurrences.
